Proposal for amendments to Appendix I

FAUNA

MAMMALIA

CARNIVORA

1.	Felidae	Felis yagouaroundi cacomitli	should	be "	deleted
2.		<u>Felis yagouaroundi fossata</u>			
3.		<u>Felis yagouaroundi panamensis</u>	44	15	11
4.		Felis yagouaroundi tolteca	11	11	78
5.		Felis yagouaroundi	11	11	added
6.		Felis pardalis mearnsi	19	H	deleted
7.		Felis pardalis mitis	11	**	11
8.		Felis pardalis	11	11	added
9.		Felis wiedii nicaraguae	11	18	deleted
10.		Felis wiedii salvinia	11	18	2 P
11.		Felis wiedii	11	99	added
12.		Felis tigrina oncilla	52	11	deleted
13.		Felis tigrina	**	17	added
14.		Felis geoffroyi	19	Ħ	18

PROBOSCIDEA

15. E1		Loxodonta		should	be	added	
--------	--	-----------	--	--------	----	-------	--

REPTILIA

SERPENTES

16.	Boidae	Python molurus molurus	should	be	deleted
17.		Pythoninae spp.	11	11	added

Proposal for amendments to Appendix II

FAUNA

MAMMALIA

CARNIVORA

18.	Felidae	Felis yagouaroundi	should	be	deleted
19.		Felis wiedii	11	11	11
20.		Felis pardalis	11	89	18
21.		<u>Felis tigrina</u>	59	11	21

REPTILIA

SERPENTES

22.	Boidae	Python spp.	should be deleted

CANADA

Proposal for amendments to Appendices I and II

Supporting statement

- Inclusion of all Felis yagouaroundi, Felis pardalis, Felis wiedii and Felis tigrina in Appendix I
 - a) the trade in skins of all these species, excepting <u>Felis</u> yagouaroundi, is extremely heavy;
 - b) it is visually impossible to identify one subspecies from another and thus importing States are unable to apply the Convention correctly;
 - c) the trade in illegal skins is obviously encouraged by the confusion with identification problems;
 - d) Canada, because of the fur industry, is probably the largest importer of spotted cat skins in the world today, and is faced with an almost impossible task of identification of skins, or parts of skins, to a subspecies level.
- 2. Inclusion of Felis geoffroyi in Appendix I
 - a) skins of this species are being heavily traded between South America (mainly Paraguay) and Canada and other nations. Over the last few years, one Canadian importer has imported over 30,000 Geoffroy's cat skins, including over 10,000 skins in three shipments between May and October 1975. Similar shipments are frequently received by other Canadian furriers either direct from South America or from nations in Europe;
 - b) if trade in this species is permitted, unscrupulous dealers are apt to include skins of F. wiedii and F. tigrina with F. geoffroyi;
 - c) the number of skins being imported into Canada is probably only a small part of the trade in skins of this species, and it is doubtful if any species can sustain such a heavy take;
 - d) with severe restrictions being placed on other species of spotted cats, dealers will turn to similar species not included in Convention appendices.
- 3. Inclusion of Loxodonta africana in Appendix I
 - a) hunting of this species has either been prohibited or is very strictly regulated in the majority of African States in which the species occurs;
 - b) the majority of elephant tusk carvings that are sold throughout the world are produced in the Far East (Hong Kong, Singapore, etc.). Once carved, it is, for practical purposes, impossible to distinguish between small carvings made from African elephant ivory (Loxodonta africana) and Indian elephant ivory (Elephas maximus). Thus controls over any illegal trade in Indian elephant ivory are nonexistent.

4. Inclusion of all Pythons (Pythoninae) in Appendix I

- a) the trade in skins of all these species is extremely heavy;
- b) it is visually impossible to identify one subspecies from another and thus importing States are unable to apply the Convention correctly;
- c) the trade in illegal skins is obviously encouraged by the confusion with identification problems.
